

AVIATION PANIC SWITCH FOR USE WITH FASTTRACKER

Description

The panic switch is designed for aircraft cockpit use, enabling the pilot or crew member to send an instant distress message via the FasTracker GPS tracking unit to any location in the world. It also has an "I'm Ok" button to be used to cancel the distress alarm, or for routine notification of safe arrival (e.g. cancel SAR watch) or waypoint. The return to base button allows flight operations control to notify the crew to return to base if necessary

Features

- Illuminated switches for night visibility
- Distress switch with guard to prevent accidental activation
- "I'm OK" and Return to Base buttons provide additional safety functions
- Rugged, impact resistant metal casing
- Overall dimensions mm: L 113.9, W 35.1, D 30.0
